## 1 Timing

Record your timing during loop and simple statements

## 2 Using My Timer

Verify Jeff Dean's numbers

## 3 Reliable Communications

Interfaces and Reliable Design

Performance and Reliability

## 4 Google RPC and Apache Thrift

## Record your timing during loop and simple statements

It proves `clock_gettime` is precise enough to catch time difference even between 2 or 3 `mov` like assembly code.

# Verify Jeff Dean's numbers

Use our function or other methods to measure some numbers in Jeff Dean's paper.

This part is to overview my measurement of our communication library.

Overhead and RTT.

- Overhead of sending
- RRT
- Single or Two machines?
- Bandwidth and analysis

Bandwidth.

What limits my bandwidth:

This part is to overview my measurement of our communication library.  
Compiler didn't influence my code large.

Method: `SerializeToString`, `SendMessageBegin` ...

Echo Server
